

Lalania and Nick have seven figs when you put theirs together.

Lalania and Maurice have five figs when you put all their figs together.

If Nick and Olivia put all their figs together, they'd have twelve.

If Olivia and Maurice put all their figs in one basket, the basket would have ten figs.

If the four kids put all their figs together and shared them equally, they'd each get four, but there would be one fig left over.

How many figs does each kid have?
